

Contractor Technical Skills Test

To begin working with us as a contractor we first require you to do a basic skills test to ensure you will be able to work with us effectively and adhere to our work flow processes.

This test is designed to allow you to prove your technical skills and knowledge in regards to the Objective-C programming language, Cocoa Touch framework, Xcode IDE and the Git source control system.

As this test is designed to be completed remotely you will be required to clone the source code, used to complete the tasks below, and then commit and push that code back to our servers once completed. This is to be done using the Git source control system.

Task 1

Clone the your tests source control repository using the details as follows:

Remote URL: git@46.137.249.76:[YOUR FIRST NAME HERE]

e.g. git@46.137.249.76:Robert

The username is git and password left blank as we are using SSH to validate the login. In Tower you should leave this fields as follows:

Username: git

Password:

Task 2

Details of this task will be available when to clone the your test repository.

Task 3

Details of this task will be available when to clone the your test repository.

Task 4

Commit and push all changes back to our server for review.
